**Re: Survey Results - Proposed Improvements on 8th Avenue from Middlefield Road to Edison Way - North Fair Oaks Area
[County Project No. RW409; Project File No. 5091]**

Dear Property Owner:

The Department of Public Works (Department) recently sent all property owners adjacent to the County maintained portions of 8th Avenue, from Middlefield Road to Edison Way, a survey to determine whether they were in favor of road improvements meeting the standards adopted by the Board of Supervisors for the North Fair Oaks Area 1 within the above-described limits. We appreciate the time you may have taken to respond to the survey. The Department evaluates the survey responses on a block-by-block basis, and we have provided the results below.

The survey results indicate that the majority [over fifty percent (50%)] of the property owners in both blocks are in favor of road improvements. The following table summarizes the survey results for each block:

8th Avenue (Percent Based on Front Footage)	PERCENT PER OPTION OF TOTAL SURVEYS SENT				
	“OPTION 1” Do Nothing	“OPTION 2” Repair & Resurface Existing Pavement	“OPTION 3” 18' with 6" Concrete Bands	“OPTION 4” 18' with 2' Valley Gutters	“OPTION 5” 18' with 3' Valley Gutters
From Middlefield Road to Oak Drive	5.73%	2.20%	6.59%	54.93%	7.03%
From Oak Drive to Edison Way	00.00%	00.00%	00.00%	50.08%	32.32%

Based on the survey results, we are proceeding with the design of the following road improvements:

- **8th Avenue - Middlefield Road to Oak Drive:**

- Option 4 - Reconstruct road to 18-feet of pavement and 2-foot wide valley gutters on both sides.

- **8th Avenue - Oak Drive to Edison Way:**

- Option 4 - Reconstruct road to 18-feet of pavement and 2-foot wide valley gutters on both sides.

As mentioned during the virtual public meeting held on January 10, 2024 via Zoom, the roadway design must include evaluating opportunities to manage stormwater such that the existing ponding or flooding is not exacerbated. This is especially important considering that Option 4 will convey stormwater more efficiently along the road. The project will likely include the installation of subsurface storage or infiltration facilities at select locations where feasible. Creating, improving, or designating areas along the roadway shoulder to allow water to infiltrate must also be considered.

During the design of the project, the Department will work to identify all issues that may affect the design or that need to be incorporated into the design. These issues may include underdrains, wells, sump pump outlets, or other improvements within or adjacent to the roadway. It is critical for our project design that you contact one of our staff listed below by email or telephone if you are aware of such improvements on or near your property. If we identify a conflict between the road project and facilities that serve your property, we will send you a letter during the design phase. The design for the project will consider and work to maintain the existing drainage patterns while improving them where possible.

During the January 10, 2024 meeting we informed you that the Fair Oaks Sewer Maintenance District (District) will replace their sewer pipes in 8th Avenue before the road is reconstructed. The District sewer pipe replacement work is planned to be included in the road project work. We will be working with all utility providers that have facilities in 8th Avenue to ensure that any improvements they are planning within the project area are coordinated with our work.

As we look towards the road construction project, we wanted to provide you with some additional information to consider regarding sewer laterals and encroachments in the road right-of-way.

The District, which provides sewer service to your property, does not assume responsibility for the installation, maintenance or repair of sanitary sewer laterals, as laterals are the responsibility of property owners. The sanitary sewer lateral is the pipe that connects the buildings on private property to the sewer main in the street. Construction of the new valley gutters will require excavation of at least one foot (1') in depth, and existing sanitary sewer laterals serving properties adjacent to the street may be encountered and require relocation during construction. Should construction conflicts or damages to your sewer lateral occur, you will be responsible for any cost incurred by the County to perform any necessary sanitary sewer lateral work during construction.

If you have been contemplating replacing your sanitary sewer lateral, believe your sanitary sewer lateral is shallow (less than 2' deep within the proposed valley gutter area) or may conflict with our work, completing replacement of your sewer lateral or performing work to avoid conflict should be performed before commencement of the road construction project. Please be advised that you must obtain a Sewer Inspection Permit (SIP) for any sewer lateral work. To obtain a SIP, contact the District at (650) 363-4100 for the fee amount and additional information. Additionally, you must obtain an encroachment permit from the County Permit Section before doing work in the road right-of-way, such as adjusting your sanitary sewer lateral or placing any encroachments in the road right-of-way. An Encroachment Permit Application form can be downloaded from the following webpage:

<https://www.smcgov.org/publicworks/permits>

Property owners will receive a letter after the construction project has been awarded to a contractor, which will provide the contractor's information and timing of the construction work. For other project related updates, please visit our project webpage at (this letter will be posted on the same webpage):
