Hi,

Recently corresponded with Ms.Leung, (in your dept) concerning PLN2019-00362, Oct14, 2021 hearing. Received initial response, since then, only auto out of office replies, both from Ms.Leung, & a Mr.Tanner. Would like to make sure my comments/questions heard. Just saw bldg plan for lot next door, from previous hearing, apparently not 1, but 2 PGE poles for elec/phone etc are shown installed right along my prop line by front driveway. Why can't poles be installed on northern line of Caltrans easement, or 20' away from my driveway? (Caltrans easement on submitted plans show 20' drive for new constr) Or better yet, with fires, PGE outages, branches from trees falling on lines on Cedar St every other year, why not require underground lines? Instead of poles or lines adjacent to or across my driveway?

With all the people out of your office, hope this gets thru. Thank you.

Tom Moore
