Stanford | ENGINEERING
Sustainable Urban Systems Initiative

NOTE: ALL RESULTS IN THIS PRESENTATION ARE PRELIMINARY

Key Takeaways

1. NFO is not at significant direct risk of coastal flooding, but may face significant indirect risks through network effects such as transportation and socioeconomic vulnerability.

Key Takeaways

1. NFO is not at significant direct risk of coastal flooding, but may face significant indirect risks through network effects such as transportation and socioeconomic vulnerability.
2. The Stanford Sustainable Urban Systems graduate project course seeks to partner with NFO stakeholders to make progress on sea level rise risk mitigation and other urban problem solving.

Key Takeaways

1. NFO is not at significant direct risk of coastal flooding, but may face significant indirect risks through network effects such as transportation and socioeconomic vulnerability.
2. The Stanford Sustainable Urban Systems graduate project course seeks to partner with NFO stakeholders to make progress on sea level rise risk mitigation and other urban problem solving.
3. El Concilio, Siena Youth Center, NFO Community Council, and Stanford SUS submitted a proposal for SMC Communities Resilience grant, seeking \$90,000 for 2019. We expect to hear about finalists in October.

Components of the Urban Risk Framework

How likely is a 100-year flood in the next 100 years?

A 100-year flood has a 1% annual exceedance rate. There is a 1% chance in any given year that a flood of this intensity or greater will occur.

How likely is a 100-year flood in the next 100 years?

A 100-year flood has a 1% annual exceedance rate. There is a 1% chance in any given year that a flood of this intensity or greater will occur.

- What is the likelihood that NO 100-year flood happens in one year? 99%

How likely is a 100-year flood in the next 100 years?

A 100-year flood has a 1% annual exceedance rate. There is a 1% chance in any given year that a flood of this intensity or greater will occur.

- What is the likelihood that **NO** 100-year flood happens in one year? **99%**
- How about **NO** 100-year flood **two years in a row**? **99% * 99% = 98.01%**

How likely is a 100-year flood in the next 100 years?

A 100-year flood has a 1% annual exceedance rate. There is a 1% chance in any given year that a flood of this intensity or greater will occur.

- What is the likelihood that **NO** 100-year flood happens in one year? **99%**
- How about **NO** 100-year flood **two years in a row**? **99% * 99% = 98.01%**
- How about **NO** 100-year flood **100 years in a row**? **(99%)¹⁰⁰ = 36.66%**

How likely is a 100-year flood in the next 100 years?

A 100-year flood has a 1% annual exceedance rate. There is a 1% chance in any given year that a flood of this intensity or greater will occur.

- What is the likelihood that **NO** 100-year flood happens in one year? **99%**
- How about **NO** 100-year flood **two years in a row**? **$99\% * 99\% = 98.01\%$**
- How about **NO** 100-year flood **100 years in a row**? **$(99\%)^{100} = 36.66\%$**
- The alternative is at least one 100-year flood: **$1 - 36.66\% = 63.4\%$**

San Mateo County's Vulnerability Assessment (<http://seachangesmc.org>) was finalized in March 2018 and includes minimal details about NFO-specific risk.

In the baseline scenario (1% annual chance storm in current sea level rise conditions), the assessment shows no exposure at all to NFO assets. **But with 3.3ft of sea level rise, a 100-yr storm would cause damage.**

North Fair Oaks (Unincorporated)

Map: Zone 6

In the unincorporated area of North Fair Oaks, no land is inundated in the baseline scenario, 8 acres are inundated in the mid-level scenario, and 50 acres are inundated

in the high-end scenario. In the baseline scenario, 35 parcels are inundated, and portions of Bay Road are affected. One underground chemical storage site is vulnerable in the mid-level scenario. Roads and storm drains (~2% and ~4%, respectively) are also vulnerable in the mid-

level scenario. In the high-end scenario, the extent of inundation includes parts of the Spring Street area. Less than 1% of the neighborhood's population is vulnerable under the mid-level scenario.

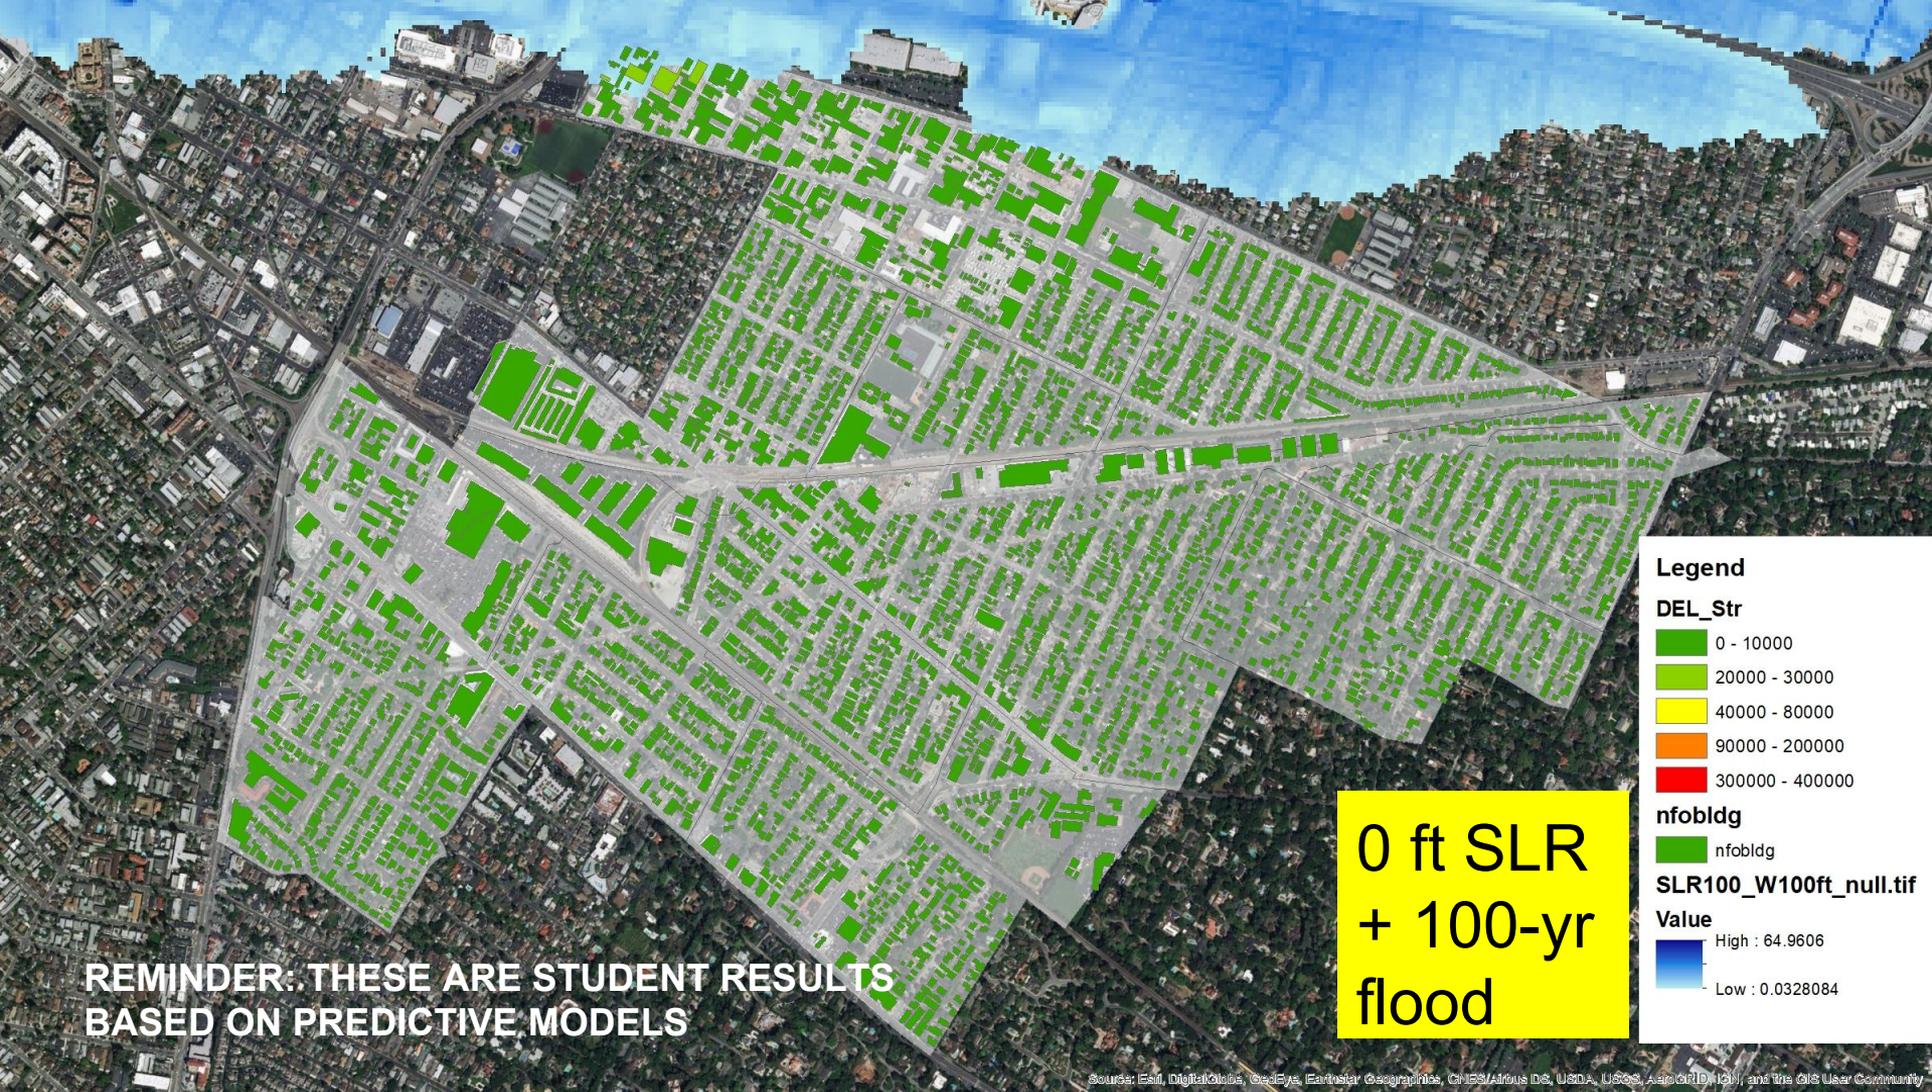

| GENERAL INFORMATION | | | | | |
|---|--------|------------------|-------------------|--------------------|-------------------|
| LAND USE, POPULATION, AND PARCELS | TOTAL | EROSION SCENARIO | BASILINE SCENARIO | MID-LEVEL SCENARIO | HIGH-END SCENARIO |
| Land Area (acres) | 766 | 0 | 0 | 8 | 50 |
| Population | 14,500 | 0 | 0 | <100 | 300 |
| Population in Vulnerable Communities ¹ | 13,000 | 0 | 0 | <100 | 300 |
| Urban Land (acres) | 766 | 0 | 0 | 8 | 50 |
| Agricultural Land (acres) | 0 | 0 | 0 | 0 | 0 |
| Industrial Land (acres) | 0 | 0 | 0 | 0 | 0 |
| Natural Land (acres) | 0 | 0 | 0 | 0 | 0 |

CHAPTER 3D | CITY- AND COUNTY-SPECIFIC FINDINGS

| | | | | | |
|--|---------|-----|-----|------|-------|
| Residential Parcels ² | -- | 0 | 0 | 0 | 56 |
| Commercial Parcels ² | -- | 0 | 0 | 33 | 102 |
| Other Parcels ² | -- | 0 | 0 | 2 | 5 |
| Parcels with No Data Available ² | -- | 0 | 0 | 0 | 0 |
| Assessed Value of All Parcels at Risk (\$ in Millions) | \$1,586 | \$0 | \$0 | \$19 | \$100 |

¹Individuals with characteristics that make them more vulnerable to flooding and other natural disasters; measured at the census block level.

²Parcel counts were only inventoried in the hazard zone.

The NFO Community Council has convened community-based organizations and a local university under the shared vision of **empowering the most vulnerable youth, working-class families, and small businesses in SMC to transform into beacons of local resilience.**

The **NFO Community Resilience Program** will build:

1. Awareness at the individual (youth/household/business) level
2. Preparedness at the individual level
3. Community networks similar to Community Emergency Response Teams (CERTs)
4. Civic education and participation in resilience planning and policy.

El Concilio of San Mateo County

Stanford | **ENGINEERING**
Sustainable Urban Systems Initiative

Key Takeaways

1. NFO is not at significant direct risk of coastal flooding, but may face significant indirect risks through network effects such as transportation and socioeconomic vulnerability.
2. The Stanford Sustainable Urban Systems graduate project course seeks to partner with NFO stakeholders to make progress on sea level rise risk mitigation and other urban problem solving.
3. El Concilio, Siena Youth Center, NFO Community Council, and Stanford SUS submitted a proposal for SMC Communities Resilience grant, seeking \$90,000 for 2019. We expect to hear about finalists in October.
